Thank you very much for the any job offer. Recently I was expecting responses on medical examinations from THE EUROPEAN COMMISSION - DIRECTORATE-GENERAL FOR EMPLOYMENT, SOCIAL AFFAIRS AND SOCIAL INCLUSION. Because what I experienced in Poland had a negative impact on my whole life and health so far. Unfortunately, I got a negative answer - which hurt me a lot and is a great injustice for me. I was expecting also for answers from a company that offers a job for an electrical installer and courses for „Python” language developers, as well as later work in this field. Unfortunately, I have not received an answer so far. Learning to program in the "Python" language - is a perfect complement to my previous professional experience - which I will be able to use later as a synergy effect in my professional work, as a 100% technical specialist, meeting in this field: contemporary requirements of a modern, technical labor market . My goal is now exactly this further career path:

- in free time learning "Python" programming and everything else - what is with closely related to this: for me it is like a medicine and a dressing, that has healing properties all the traumas which I have experienced. Learning "Python" programming have for me a preventive effect on recurring enough often post-traumatic stress disorder PTSD.
- I wanted to avoid digging up all these traumas: but people did not let me and did not help me, but even forced me to use it all in the fight for justice against the guilty - even though it is painful for me and harmful to my health.

I am still actively looking for job opportunities for the Tesla brand in any location in the world - where I could use English or Polish on a daily basis. I believe that working for Tesla would allow me ideally - just such a further path of professional development, because I want to learn programming languages to take full advantage of such additional skills at work - as a professional technician. My programming adventure began with creating an account on GitHub on February 2, 2021. Please visit my portfolio page: <https://lukegreenplayer.github.io>. I am fascinated by Tesla Cybertruck - is there any work for me related to this project? When I earn money to pay my debts - I dream of buying a Tesla Cybertruck. I have the impression that this car expresses 100% of my existence. She is an incredibly raw and functional beauty. I dream of buying such a set to be a professional Tesla showcase, as a technician performing all work in the outdoor area - I am most interested in work related to: "power wall", chargers, solar panels and "solar roof" or wind turbines. Of course, I can also do any job in Tesla factories or in other "Green Sector" factories, according to my professional experience and acquired skills. As a telecommunications technician by school, I would also be very happy to be able to work in implementations and installations of terrestrial internet access infrastructure from the STARLINK constellation created by SpaceX. If I became a professional and independent programmer with extensive knowledge - I would also be very happy to do my work remotely from my hometown in the Giant Mountains in Poland. Of course, I also realize that you need to be physically on site project from time to time.

Green Player - At Your Service. "Green" Technician: When We Work Together - I am Also a Good Team Player And I Care About Team Spirit. I need a job as soon as possible in "Green Sector" or other related to my experience. I need payments per week for work (It can also be every two weeks or every month - if such a pay system is necessary) + one person room accommodation. I can also live in a container or summer house all year round - I need a single room locked with a key due: to the need to store important private documents. I also need peace sometimes in the evenings for possible contact with my lawyer in Poland - to establish a strategy for repayment of my debts. I am currently preparing my bankruptcy petition. On April 30, 2021 I was forced to close my one-man Polish company:

- it was all attempts to save my life and health during a global pandemic - because of human injustice, greed, envy, lies and hypocrisy: what I experienced in this very sick and spoiled Polish State from the age of 18.

I have experience in: assembly and disassembly of analyzers for measuring power quality in live electrical switchgears, for the purpose of selecting and assembling sets for reactive power compensation. I did this work in the company "Elektromont" for the director, Dr. Paweł Podolski from Jelenia Góra. The power quality analyzer is also a measuring device - only more advanced, having many other measuring functions than a standard meter or electricity meter. I also have many years of experience as an electromechanic - welding equipment service technician and electrician. From the vocational school - I am network and telecommunication device fitter, I had practice in school and t.p. s.a and "excellent" grade on the professional diploma. From the college technical school - I am telecommunication technician. I had secondary school certificate and "excellent" grade on the professional diploma. I have good ability use tools and assembly of various devices and equipment. I am a clever and agile man, work in small spaces and at high altitude is not a problem for me. I worked in the production of BEKAERT power cabinets for machines designed for specialized glass processing. These were large power sources based on IGBT SEMIKRON modules. I also made other smaller INV supply drawers for the BEKAERT company from Belgium. In Belgium, I had also in Belgium my first foreign order for my one-man company, they were: machine assembly (pallet packing machine, automatic plasma cutting table, other technical and assembly work).

I also have experience in assembling two server rooms and several smaller network cabinets. I also installed lighting switchboards, socket sets and a temperature and cooling control and measurement box along with other equipment in the transformer room. I also worked on installations - electrical and teletechnical. Lighting, cable routes, monitoring, security and fire alarm systems.

I also did basic repairs on my cars: Fiat 126p, Renault 9, Renault 19, Peugeot 106, VW Passat B4: replacement of brake pads, brake drums, brake discs, bearings, brake pipes, steering rods, half drive axles, exhaust systems, alternators, voltage regulators, ignition coils, ignition wires, spark plugs, lamps, cooling hoses. Air, oil and fuel filters. Assembly and disassembly of parts, minor work in paint, replacement of exploitation fluids and other consumable parts. I am not afraid of mechanical work, I am ready to undertake new tasks in this topic and I am ready to learn new things - the most that are related to "Green Sector".

I am ready to various work in the onshore and offshore objects. Over this time I would like to get necessary experience and all requirements licenses to work in "Green Sector" - this is also my professional purpose.

I have a driving license category "B, C" and a lot of experience driving on various vehicles. - military certificate of course completion from the rules of operation and driving vehicles special and used for special purposes, for trucks, passenger cars, command vehicles. I have a license for basket lift and scissor platforms category IP. I have experience in handling forklifts, but I not have a license. I can do basic welds, minor locksmith works and construction montage. I readed the 178-page VCA manual in the Polish language. I have theoretical knowledge and many years of practice in this area and I am ready for the VCA license exam. I readed materials about GWO standards "Basic Safety Training Standard Version 10" to know scope of training and requirements for candidates. I passed the SIEMENS course: SE-GL-SP-85400 General Electrical Awareness L-Aus, SE-GL-SP-85695 Introduction to Lifting Bags. My English is at the comunicative level "B2", I try all time to improve it to level "C2" - this is also my purpose.

I want to work in the "Green Sector" - because: working in the "Green Sector" is my life purpose. I love nature and mother earth - these private beliefs are a special motivation for me. I believe that "Green Sector" is a great future for the nature, mother earth and for us people. I am ready work in delegations and professional travel. I want continuous improvement of skills, gather of knowledge and all licenses necessary for effective and professional work in the "Green Sector". It would be great to work in an international environment in the "Green Sector".

I also played in the "Wind Challenge", the participants' competition was based on the "Digital Clone" program from Sentient Science: <https://sentientscience.com>. Unfortunately, I could not finish the competition because I had to go to work at the scaffolding in Germany, in the evenings I did not have time to participate in the competition.

Below I am quoting a part of my previous cover letter - why I decided to set up "Green Player - At Your Service" in the period from 01/05/2020 to 30/05/2021:

"I dreamed of a normal life in Poland, starting my own family, building a beekeeping farm, serving in a volunteer mountain emergency service - because I'm from The Giant Mountains – polisch name Karkonosze. Unfortunately, greedy and envious people did not allow me to realize my good plans for living in Poland, even though I worked hard for it since I was 18 years old. My life in Poland is destroyed. Now I don't have a work in Poland. I have to work abroad to pay off my debts. I have to pay debt average EUR 35577, or PLN 160000.

I asked my Polish state and health service for help - I didn't get any help. I must managed alone - that's why I decided to founded "Green Player – At Your Service" and will be Freelance "Green" Technician – At Your Service, because this difficult time during the SARS-CoV-2 virus pandemic outbreak requires special adaptation to individual business needs. I have hope to start a new life and work in "Green Sector". I am ready to work hard and I am ready to work 10 hours per day (or more, or in another time system as needed, also at weekends and holy days) to save my tomorrow and be useful for You. Words that accurately describe my current situation are: Get Earn or Die Tryin'. I always try to be professional and very good technician. If I get order from You it will be an investment in a man who repays with solid work and constant development to professionally perform tasks. I attach my resume and other useful documents and some foto from my job and foto my small electrician equipment. At the moment I have not own car and I have to travel with all available means of transport. If your order requires it - I can rent a car tailored to the order and and necessary equipment. I have Polish health insurance accepted throughout the European Union. I can issue an invoice for work done anywhere in the European Union,

because I have a European tax number - EU VAT: PL 6112444076, elsewhere in the world - after checking and adjusting legal tax conditions. I need payments every week or two weeks for issued invoices + one person room accommodation, If you can't provide me accommodation - I'll try to find them on my own. My salary is set individually for the needs of Your order. When it is possible arrive to work on bike to 15 km from my accommodation place, it is not a problem for me."
